

**SERVER SYSTEM WITH SEGREGATED MANAGEMENT LAN
AND PAYLOAD LAN**

Abstract of the Disclosure

5 A cPCI server system includes a plurality of host processor cards for providing management LAN communications and payload LAN communications. A first card is coupled to the plurality of host processor cards and is coupled to a payload LAN. The plurality of host processor cards are configured to provide payload LAN communications through the first card. A second card is coupled to the plurality of host processor cards and can be optionally coupled to a management LAN. The plurality of host processor
10 cards are configured to provide management LAN communications with the management LAN through the second card.
